## IntelliScrub

The ultimate in modularity and flexibility

The new ULTIMAXX range features new eco-efficient IntelliScrub technology for dynamic levels of cleaning excellence. Now you can choose from rotary, cylindrical or even orbital cleaning decks. With ULTIMAXX there is a perfect machine configuration for you.

## ULTIMAXX IntelliScrub

Single & double disc drive

Single or twin rotary disc with either pad drive or brush options give limitless possibilities. Dual disc technology (55 cm) delivers high productivity in combination with excellent cleaning results. The new single disc (43 / 50 cm) deck has direct gear construction, significantly improving the robustness and longevity. TASKI patented double disc and offset design makes close-to-wall cleaning simple. Rotary decks apply good levels of pressure and have low RPM for excellent cleaning results. Brushes are available from soft nylon up to abrasive. Although lasting longer than floor pads, brushes don't offer the same surface area that floor pads do. Therefore floor pads are the best choice for flat, non-porous surfaces. There are a multitude of choices for floor pads, from traditional composites to Twister Diamond and even microfibre. Floors should always be pre-swept prior to scrubbing with disc machines as they are not designed to pick up debris.

Choose from twin discs for high productivity or single disc for flexibility & agility. Disc drives offer the broadest range of solutions for all floor types and all environments. However for uneven floors and/or floors with high levels of debris and soilage, cylindrical or orbital decks should be considered.

## ULTIMAXX IntelliScrub

Orbital deck

Multi-functional orbital scrubbing decks combine high down pressure with a rectangular scrub deck which is micro-isolated at very high speed. Ideal to reach into corners, along edges and into other hard-to-reach areas, the orbital decks are available in 50 and 60 cm working width. Use this technology with the correct pad to maximize productivity and save on labour costs. Designed predominately for heavily soiled areas, orbital decks can be used to remove floor finishes without chemicals. Like rotary decks, orbital decks require pre-sweeping.

A perfect choice for industrial environments where soilage is typically higher. Ideal for manufacturing, warehousing and transport sectors or where hazardous chemical stripping is forbidden or not advised.

## ULTIMAXX IntelliScrub

Double roller brush

The new ultra-robust twin roller brush deck available with 55 /65 cm working width sweeps and cleans in a single pass. The hopper collects all loose debris and can be emptied within seconds. This brush deck sets a new standard for cleaning in tough environments with structured floor surfaces like concrete. Up to 30% increased efficiency can be achieved by eliminating pre-sweeping completely. Ideal for large open spaces that may have small debris or where pre-sweeping is not possible. Cylindrical brushes have a very high RPM that "flick" soil from the surface into a hopper tray that holds debris preventing blockages. Cylindrical brushes are suitable for profiled, uneven and tiled floors with grout lines. Similar to disc machines, brushes come in many different filament options from soft to abrasive. Unlike disc decks, floor pads are not available. The greatest benefit of cylindrical scrubbers is that they eliminate the need for pre-sweeping, saving the cost of a separate sweeper and 30% in labour.

Cylindrical decks are suitable for use in environments with uneven floors, where debris and higher silage is present such as warehousing, transport, food and beverage processing, manufacturing facilities and parking facilities.

Choose the best ULTIMAXX configuration to meet your needs from our IntelliScrub options.

## IntelliScrub - Twister Setting

The new TASKI ULTIMAXX single and twin rotary disc range has a fully integrated and optimized Twister setting. With one touch of a button, the machine directly adjusts the speed and water settings for perfect results with Twister. Furthermore, the ULTIMAXX range is offered with a special Twister deck with a high-speed function where cleaning and polishing are combined. This combination allows you to work to a standard speed but reach floor shine levels normally associated with specialised polishing methods. Now the floor appearance can be efficiently and significantly upgraded within your daily maintenance cleaning. All at the push of a button, the Twister button.
