

SUMA® DISH: Next Generation Commercial Dish Detergent

When selecting a manual ware washing detergent for your food service operation, food safety managers need to consider multiple factors to ensure both stellar hygiene and operational efficiency. Effective removal of grease and grime is critical; a detergent must be designed for the high volume of heavy soils found in the scullery.

Kitchens can also vary significantly in temperature. Suma Dish was designed to provide consistent performance in both standard and cold room settings. This flexibility provides confidence that dishes will come out of the rinse compartment soil-free across the different environments in your operation. As we know, sanitizer cannot do its job unless the surface to be sanitized is truly clean. Said another way; a sanitizer is only as good as the detergent allows it to be.

In addition to its impressive cleaning capabilities, Suma Dish aligns with Diversey's commitment to sustainability. The detergent's super-concentrated formula means less packaging waste and a reduced carbon emission. In fact, switching to Suma Dish can lead to a 61% reduction in plastic and cardboard usage, as well as an equivalent reduction in CO2 emissions per case: equivalent to saving 15.6 gallons of gasoline.

Selecting the right dish detergent involves balancing performance, compliance, adaptability, and sustainability. Suma Dish provides a step-up in all criteria, making it an excellent choice for food safety professionals seeking a reliable, efficient, and eco-friendly cleaning solution.
