

Driving Cleaning Results with Data Insights

"This is, by far, the most impressive data analytics program in the industry. Well done."

USA retail client

- ✓ Through our digital platforms you get actionable data
- ✓ Visualise store scores using dashboards and deep-dive features

Chemical Use

- Controlled chemical dosing allows us to accurately measure compliance and utilise red flag indicators to identify areas of risk
- Over and under consumption analysis by store, area and region to show outliers
- Answers the question: "How much should we be using?"
- Connect audit data with chemical purchase data to see the 'bigger picture'

Central Analysis

- Layer local health department data onto audit & chemical trends
- Dashboard deployment for headquarters and field leadership for comprehensive management of risk

High Risk Areas

- Are your high-risk areas sanitised? We can identify non-compliance of cleaning in our analytics programme
- Water consumption analysis & red flag indicators embedded into audit forms, layered with chemical consumption for insights into potential high-risk areas
